

RPE Instructions

1. Place the safety string around your wrist to prevent choking in the event the key is accidentally dropped.
2. Insert the key into the front hole and gently push steadily toward the back of the throat. This will bring the next hole into view.
3. **DON'T BACK UP.** Remove the key toward the throat.
4. If you miss a day, just add a day to the end

Also Note:

- The patient will feel pressure for a few hours each time the key is turned during the first few days.
- As needed for discomfort, give Tylenol or Ibuprofen, as directed on the bottle for your child's age and size.
- Space will open between the front teeth. It will begin to close slowly after the last swing.
